Maricopa San Juan New Mexico  
 (Field) (County or Subdivision) (State or Territory)

The elevation of the G. L. 7441.74 above sea level is 527 ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to a depth sufficient to test the Gallup Sandstone Formation. The well is to be drilled to the base of the San Juan Formation, at an estimated depth of 1950 ft. 7 in. surface casing will be cemented at approximately 100 ft., circulating to top of ground with 50 sacks of cement. It will drill a 6 1/8 in. hole through said San Juan Formation. We will run electric logs. If production string is necessary we intend to cement a 1 1/8 inch, 9.5 pound, casing through the producing horizon and perforate. Rotary tools will be used.

This test is planned primarily to explore the oil possibilities of the Gallup Sandstone Formation.

ILLEGIBLE

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
