(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well with rotary tools to an estimated depth of 1386' to the top of the Dakota formation. Approximately 1386' of 5 1/2" O.D. casing will be run and cemented to surface. We will then drill out from under the 5 1/2" casing with cable tools and complete the well open hole.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
