☐ New Construction
☐ Non-Routine Fracturing
☐ Water Shut Off
☐ Conversion to Injection

13. Describe Proposed or Completed Operations

In order to increase production it is planned to workover and restimulate this well in the following manner:

Pull tbg, set drillable BP near btm of 7" csg and PT to 1000#. If tbg is stuck, cut off tbg \pm 100' below 7" csg shoe, set a drillable cmt ret near btm of 7" csg, squeeze open hole w/ \pm 330 sx cmt. PT 7" csg 1000#. Isolate and squeeze cmt any leaks. If leaks are squeezed near base of Ojo Alamo, no additional block squeeze of 7" annulus is planned. If there are no leaks near base of Ojo Alamo, perf 2 squeeze holes @ base of Ojo Alamo and block squeeze 7" annulus w/approx. 50 sx cmt. CO if hole conditions permit; otherwise, sidetrack and drill to \pm 5950'. If mechanical conditions do not permit sidetracking from open hole section, a CIBP will be set 100' above 7" csg shoe and a window cut in the csg w/whipstock and mill, then drl to \pm 5950'. Run a full string of 4 1/2" prod. csg & sufficient amt of cmt to tie into the 7" csg shoe. Selectively perf & sandwater frac the Mesa Verde formation.

14. I hereby certify that the foregoing is true and correct
