13. Describe Proposed or Completed Operations

It is intended to repair the casing for the subject well and then add pay to the Menefee and Lewis zones. A bond log will be run before perforating to determine top of cement, and a cement squeeze will be submitted as required. The Menefee will be perforated between 4958' and 5260' with specific perforations chosen after the logs are run and stimulated with 110,000# of sand. The Lewis will be perforated between 4000' and 4915' with specific perforations chosen after the log run and stimulated with 90,000# of sand. The well will then be returned to production.
