NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

- 1. A pacier leakage test shall be commenced on each multiply completed well within seven days after access completion of the well, and assembly the nester to prescribed by the order authoriting the multiple completion. Such seen shall also be connected as all multiple completions within sweet days following recompletions and/or chemical or fine-one exament, and whenever remedial work has been done on a well during which the packer or the taking have been disapted. Tests shall also be miss at any time that communication is suspected or when requested by the Division.
- 2. At least 72 hours prior to the communication of any packer leakage test, the operator shall assist the Division in writing of the exact time the test is to be communed. Offset operators shall also be so notified.
- 3. The pactor leakage test shall communes when both some of the dual completion are shall for pressure stabilization. both somes shall remain shall need the well-head pressure in each last stabilized, provided however, that they need not commin shall in more than seven days.
- 4. For flow Test No. 1, one zone of the dust completion shall be produced at the normal rate of produced on while the other zone remains also in. Such test shall be consisted for seven days if the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer instage test, a gas well in being flowed to the atmosphere due to the lack of a pipeline connection the flow period shall be three lower.
- Following completion of flow Test No. 1, the well shall again be shin-in, in accordance with Paragraph 3 above.
- 6. Flow Test No. 2 shall be constanted even though no leak was indicated during flow Test No. 1. Proceedure for Flow Test No. 2 is to be the same as for Flow Test No. 1

which should be a substitute of the state of

- ed on each multiply completed well within seven days after except that the provincely produced zone shall remain shart-in while the therefor as accordingly by the order authorizing the was provincely shart-in in produced.
 - 7. Pressures for gas-unus team must be uncounted on each zone with a c pressure gauge at time inservals as follows: 3 hours tests: immediately beginning of each flow-period, at fifteen measure annexels thereof, and at hearly inservals thereofer, including one pressure measurements print to the flow period, at least one time during each flow approximately the midway point) and immediately prior to the constant. How period, or may be requested. Other pressures may be taken as decired, or may be requested these proximally shown questionable test date.
 - 24-hour oil sum same: all pressures, throughout the entire test, shall be continuedly measured and securded with recording pressure gauges the which must be checked at least twice, cace at the beginning and came as each set, with a deadweight pressure gauge. If a well is a goo-oil or as completion, the securiting gauge shall be required on the ell same only deadweight pressures as required shows being taken on the gas zero.
 - Companies.

 The results of the above described tests shall be filed in triplicate wafur completion of the above described tests shall be filed in triplicate wafur completion of the test. Tests shall be filed with the Assec District. New Mexico Oil Conservation Division of Northwest New Mexico Parest form Revised 10/01/78 with all deadweight pressures indicated the as the flowing temperatures (gas zones only) and gravity and GOR (oil
