Temporary Abandon Procedure – 10/7/2002

Summary/Recommendation:
The San Juan 29-7 Unit NP #560 was drilled and open-hole completed as a Fruitland Coal producer in 1990. Cumulative production for this well is 142 MMscf and it has not produced since 1999. The ~~NMOCD has sent us a notice to produce, plug, or temporarily abandon this well as soon as possible.~~ This well is located on the fringe of the OPE/UPE boundary and the original completion may not have been effective. The Fruitland Coal team recommends that we temporarily abandon this well to allow time to further evaluate its potential. We will pull the tubing, set a CIBP over the open-hole interval, perform a mechanical integrity test on the casing, and leave the well loaded with an inhibited packer fluid.

1. Comply with all BLM, and BROG regulations. Conduct daily safety meetings for all personnel on location. **Notify BROG Regulatory (Peggy Cole 326-9727) and the appropriate Regulatory Agency prior to pumping any cement job. If an unplanned cement job is required, approval is required before the job can be pumped. If verbal approval is obtained, document the approval in DIMS.** Allow as much time as possible prior to pump time in case the Agency decides to witness the cement job.

2. MOL and RU workover rig. Obtain and record all wellhead pressures. NU relief line. Blow well down and kill with 2% KCl water if necessary. NU BOP with stripping head. Test and record operation of BOP rams. Have wellhead and valves serviced as necessary. Test secondary seal and replace/install as necessary.

3. TOOH and stand back 2-3/8", 4.7#, J-55 tubing (92 joints set at 2904'). Round trip 7" gauge ring or casing scraper to 2770'.

4. Set a 7" wireline CIBP at 2760'. Load casing with water and circulate well clean. Pressure test casing to 500#. If casing does not test, contact superintendent and operations engineer.

5. Load hole with 1% Unichem Technihib 606 packer fluid mixed with water (approximately 110 bbls). TOOH and LD tubing.

6. ND BOP and NU WH. RD and MOL. Leave well shut-in.
