Dear Mr. Perrin:

Thank you for the opportunity to meet with you concerning bradenhead issues, including the above referenced well.

The San Juan 29-7 Unit #79Bl has pressure on the intermediate but not on the bradenhead. The intermediate casing string is landed into the Lewis and the top of cement on the production string covers the Huerfanito Bentonite. See the attached wellbore schematic for more detail.

There is no contamination of fresh waters as evidenced by the lack of bradenhead pressure.

Since the well is located north of the Chacra line, there is only one zone exposed. Therefore correlative rights are protected and we believe that no remedial action is necessary.

We would appreciate your looking at the information we have provided and letting us know that you agree.

Again, we appreciate your time and efforts in working with us on these issues.

Sincerely,

Peggy Cole /

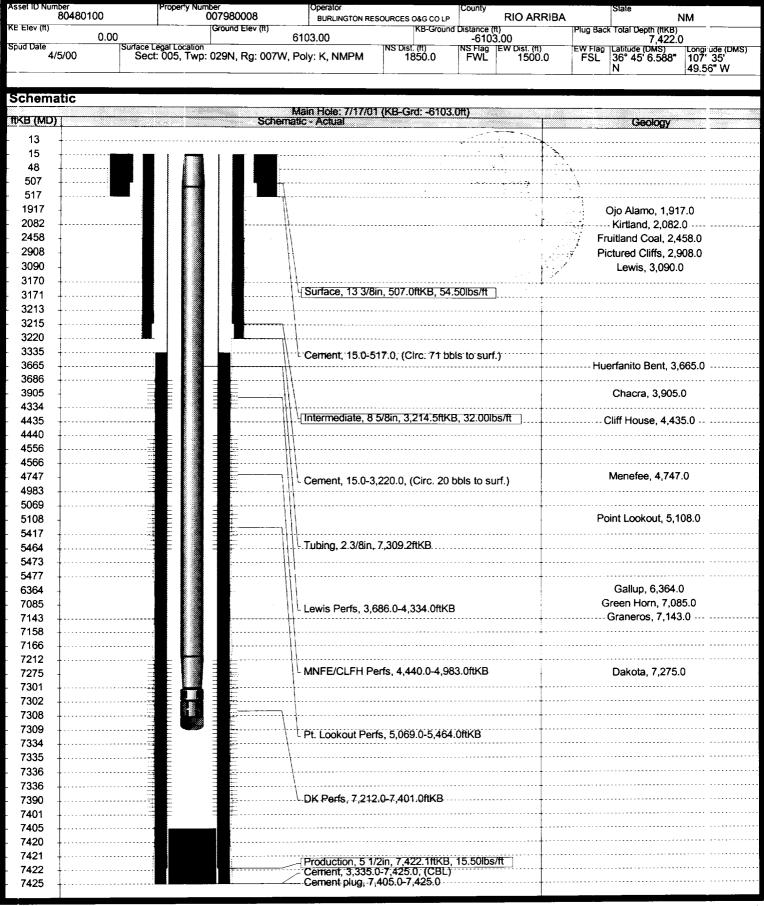

Regulatory Supervisor
