Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi.	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement.	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pak planned.	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pak planned if there are no leaks near the base of the 0jo Alamo formation, performance.	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed.
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pak planned.	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed.
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pair planned the base of the 0jo Alamo formation, performat the base of the 0jo Alamo formation and block squeeze the 7" annulus 125 sacks of cement.	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed. rate 2 squeeze holes as with approximately
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cament any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pair planned if there are no leaks near the base of the 0jo Alamo formation, perfor at the base of the 0jo Alamo formation and block squeeze the 7" annulus 125 sacks of cement. Clean cut if hole conditions permit, otherwise sidetrack and redrill to	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed. rate 2 squeeze holes as with approximately so approximately 5400'.
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pair planned if there are no leaks near the base of the 0jo Alamo formation, perfor at the base of the 0jo Alamo formation and block squeeze the 7" annulus 125 sacks of cement. Clean cut if hole conditions permit, otherwise sidetrack and redrill to Run a full string of 4 1/2" production casing and sufficient amount of	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed. rate 2 squeeze holes as with approximately co approximately 5400'.
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cament any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pak planned if there are no leaks near the base of the 0jo Alamo formation, perfor at the base of the 0jo Alamo formation and block squeeze the 7" annulus 125 sacks of cement. Clean out if hole conditions permit, otherwise sidetrack and redrill to	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed. cate 2 squeeze holes as with approximately co approximately 5400'.
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pair planned if there are no leaks near the base of the 0jo Alamo formation, perfor at the base of the 0jo Alamo formation and block squeeze the 7" annulus 125 sacks of cement. Clean cut if hole conditions permit, otherwise sidetrack and redrill the 7" casing shoe. Selectively perforate and sand-water fracture the 7" casing shoe. Selectively perforate and sand-water fracture the same standard sand-water fracture the same sand-water fracture the 1000 psi.	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed. cate 2 squeeze holes as with approximately co approximately 5400'.
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pair planned if there are no leaks near the base of the 0jo Alamo formation, perfor at the base of the 0jo Alamo formation and block squeeze the 7" annulus 125 sacks of cement. Clean out if hole conditions permit, otherwise sidetrack and redrill to Run a full string of 4 1/2" production casing and sufficient amount of	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed. cate 2 squeeze holes as with approximately co approximately 5400'.
Pull tubing, set a drillable bridge plug near the bottom of the 7" car 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" car cement retainer near the bottom of the 7" casing, squeeze the open he sks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pak planned if there are no leaks near the base of the 0jo Alamo formation, performant the base of the 0jo Alamo formation and block squeeze the 7" annulus 125 sacks of cement. Clean cut if hole conditions permit, otherwise sidetrack and redrill the 7" casing shoe. Selectively perforate and sand-water fracture the 18.1 hereby certify that the information above is true and complete to the best of my knowledge and belief.	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed. cate 2 squeeze holes as with approximately co approximately 5400'.
Pull tubing, set a drillable bridge plug near the bottom of the 7" car 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" car cement retainer near the bottom of the 7" casing, squeeze the open he sks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is pak planned if there are no leaks near the base of the 0jo Alamo formation, performant the base of the 0jo Alamo formation and block squeeze the 7" annulus 125 sacks of cement. Clean cut if hole conditions permit, otherwise sidetrack and redrill the 7" casing shoe. Selectively perforate and sand-water fracture the 18.1 hereby certify that the information above is true and complete to the best of my knowledge and belief.	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed. rate 2 squeeze holes as with approximately to approximately 5400'. cement **x* to tie into the Mesa Verde formation.
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is mak planne. If there are no leaks near the base of the 0jo Alamo formation, perfor at the base of the 0jo Alamo formation and block squeeze the 7" annulus 125 sacks of cement. Clean out if hole conditions permit, otherwise sidetrack and redrill the 7" casing shoe. Selectively perforate and sand-water fracture to the 7" casing shoe. Selectively perforate and sand-water fracture to 18. I hereby certify that the information above is true and complete to the best of my knowledge and belief. Signed F. H. WOOD TITLE Petroleum Engineer	sing & pressure test to sing shoe, Set a drillable ble w/approximately 200 base of the Ojo Alamo ed. Tate 2 squeeze holes as with approximately 5400'. Comment to tie into be Mesa Verde formation.
Pull tubing, set a drillable bridge plug near the bottom of the 7" can 1000 psi. If tubing is stuck, cut off tubing approximately 100' below the 7" can cement retainer near the bottom of the 7" casing, squeeze the open hasks. of cement. Pressure test the 7" casing to 1000 psi. Isolate and squeeze cement any leaks. If leaks are squeezed near the formation, no additional block squeeze of the 7" annulus is mak planned if there are no leaks near the base of the 0jo Alamo formation, perfor at the base of the 0jo Alamo formation and block squeeze the 7" annulus 125 sacks of cement.
