

NEW MEXICO OIL CONSERVATION COMMISSION
PACKER SETTING REPORT

I, Don R. Read
Name of party making report
knowing of the facts hereinbelow set out, do state:

That I am employed by El Paso Natural Gas Company in the capacity of
Petroleum Engineer, that on September 10, 1977

I personally supervised the setting of a Baker Model "D"
Name & type of packer
in El Paso Natural Gas Company, Roelofs A
Operator of well *Lease name*
Well no. 3A located in the Blanco P. C. Ext & Blanco MV field,
San Juan county, state of New Mexico, at a subsurface depth of
3235' feet, said depth corresponding having been found by
Wireline Measurement

That the purpose of setting this packer was to effect a seal in the annular space between two strings of pipe where the packer was set so as to prevent the commingling in the bore of this well of fluids produced from a stratum below the packer with fluids produced from a stratum above the packer; that this packer was properly set and that it did, when set, effectively and absolutely seal off the annular space between the two strings of pipe where it was set in such manner as that it prevented any movement of fluids across the packer.

Petroleum Engineer
