Re: Annual Deliverability Test
State Com P #12
M-36-29N-8W

Dear Jim:

I agree that the additional two-hour shut-in for equipment repair did not appreciably affect the volume produced during the period represented by the attached chart.

The chart is acceptable to be used as the "flow chart" for the annual deliverability test of the subject well.

If there are further questions, please contact ua.

Yours very truly,

A. R. Kendrick

Re: Deliverability Test
State Com P #12
San Juan County, New Mexico

Dear Mr. Arnold:

El Paso cancelled the attached deliverability due to a two-hour repair of equipment during the eight-day final flow period. This well is normally flowed under stop-cock operation. As can be seen on the attached copy of the test chart, the two-hour shut-in had little or no affect during the test period. We feel that this deliverability should be accepted for 1971.

Very truly yours,

J. C. Johnson
Vice President Production
