D.J. SIMMONS, INC.

L. V. Hamner A1 Sidetrack Procedure

A section milled window was cut in the 7" casing from 2590' to 2672'. A cement kick-off plug was set from 2440' to 2880'. See attached well bore schematic.

- 1. MIRU Aztec Rig 433.
- 2. Nipple down well head, nipple up BOPE. Pressure test BOPE to 2000 psi.
- 3. Run gyro directional survey from 2440' to surface.
- 4. PU mill tooth bit. RIH and tag cement plug at 2440'. Time drill cement to top of window at 2440'. Use fresh water. TOH.
- 5. PU Baker Hughes Inteq kick off assembly and 6 1/4" bit. TIH.
- 6. Drill out of 7" casing using 6 degree / 100 ft build rate. Build angle to +/- 45 degrees. Precise directional drilling plan to follow. Use fresh water / polymer mud until casing is cleared. Then unload hole and use air, air/mist for drilling fluid. Steer with gyro until magnetic interference from 7" casing is minimized, then steer with single shot surveys. Drill to target depth of 4750 ft (TVD). Proposed bottom hole location is 1300' FSL x 710 FWL, section 21, T29N, R9W.
- 7. Blow hole clean.
- 8. Run 4 1/2", 10.5 ppf, J55 casing to TD. Cement in two stages to surface.

Completion procedure to follow. A cased hole neutron log will be run in the side-tracked hole with completion rig.
