DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the above well to approximately 5000 feet. Rotary tools will be used to total depth. Casing will be set on top of Cliffhouse. Masoverda formation will be drilled with gas and cleaned out with gas after shot with SW.

The following casing program is proposed:

Size	Depth	Weight	Remarks:
9-5/8"	250'	200	175% of calculated amount to circulate.
7"	4000'	300	150% of calculated amount to fill 1260' above shoe.

Copies of location plate are attached. A copy of any survey taken will be submitted upon completion of well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operation.
