- 1. A packer leakage test shall be commented on each smitiply completed well within sevan days after actual completion of the well, and assembly thereafter as prescribed by the order authorizing the analysis completions. Such tests shall also be commented on all multiple completions within seven days following recompletions and/or chamical or fran-test treatment, and whenever remainful work has been done on a well during which the packer or the mixing have been disturbed. Tests shall also be taken at any time that communication is suspected or when sequented by the Division.
- At least 72 hours prior to the commencement of any packer leakage sect, the operator shall notify the Division in writing of the exact time the text is to be commenced. Offset operators shall also be so recified.
- The pactor testings east shall commence when both sonns of the dual completion are shall in for pressure stabilization. Both sones shall remain star-in until the well-best pressure in each less restabilized presided because that they need out making their press does not not the
- 4. For flow Test No. 1, can arom of the dual completion shall be produced at the normal rate of production while the other none remains also in. Such test shall be consisted for seven days if the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well in being flowed to the attemphase due to the lack of a pipeline connection the flow period shall be done bear.
- Following completion of flow Test No. 1, the well shall again be steet-in, in accordance with Paragraph 3 above.
- Flow Test No. 2 shall be conducted even shough no leak was indicated during flow Test No. I Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1

- acopt that the proviously produced some clash season chat-in while ras proviously alam-in in produced...
- 7. Preserves for gas-sees trees seem to measured on each same with preserve gauge at time inservels as follower 3 hours seem immediately beginning of each flow-period, at fifteen manner inservels during the shareof, and at heavily inservels themselver, including one preserve me immediately prior to the flow period, at lepst one time-during such flow precisions by the middle prior to the country flow prior of the country points on the country of the country prior o
- continuously recurred and recorded with recenting pressure program which must be checked at least twice, once at the beginning and ence each set, with a deadweight pressure gauge. If a well is a gas-oil or completion, the recording gauge shall be required on the oil men and deadweight pressures as required above being steam on the gaz zone.

  8. The results of the above described tests shall be filed in triplicate.
- After completion of the test. Tests shall be filed with the Azarc Distr.
  New Maxino Oil Conservation Division of Nonterest New Mexico is
  Test form Revised 10/01/78 wide-bil deadweight pressures indicated
  as the flowing temperatures (gas none only) and gravity and GOR (c.
