IMPORTANT WATER BARRIERS

[illegible]

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of reworking, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked," or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or balling.

HISTORY OF OIL OR GAS WELL

1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator who is responsible for the investigation. The investigator must identify the problem and the scope of the investigation. 2. The second step is the collection of data. This is done by the investigator who is responsible for the investigation. The investigator must collect data that is relevant to the problem and the scope of the investigation. 3. The third step is the analysis of the data. This is done by the investigator who is responsible for the investigation. The investigator must analyze the data to determine the cause of the problem and the scope of the investigation. 4. The fourth step is the interpretation of the results. This is done by the investigator who is responsible for the investigation. The investigator must interpret the results to determine the cause of the problem and the scope of the investigation. 5. The fifth step is the reporting of the results. This is done by the investigator who is responsible for the investigation. The investigator must report the results to the appropriate authorities.	1.
