(Range)

N.M.P.M.
(Meridian)

Elanco Mesa Verde
(Field)

Rio Arriba
(County or Subdivision)

New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is 6131 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to temporarily abandon this well in the following manner:

1. Move in workover rig.
2. Attempt to pull tubing, using blind choke if necessary.
- 2a. If tubing is stuck, cut off same at 100' below casing.
- 2b. If tubing is free, then pull and lay down tubing.
3. Set cast iron bridge plug in bottom of intermediate casing and dump 100 sacks cement on plug if all the tubing is recovered from the well.
4. If fish is left in open hole, then spot 100 sacks cement through tubing and attempt a bradenhead squeeze. Leave tubing in well above cement.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
