The elevation of the derrick floor above sea level is **6325** ft.

DETAILS OF WORK

(State names of and expected depths to be drilled, show sizes, weights, and lengths of proposed casings, indicate mudlogging points, and all other data relating to proposed work)

This well was temporarily abandoned in the following manner:

Tubing was found to be stuck and was cut off @ 5250'. An attempt was made to spot a 200 sack plug on tubing stub, cement circulated to surface through a hole in the tubing @ approximately 750', cement also went down the tubing and plugged the casing @ 4450'.

A 100 sack plug was spotted on top of the plug @ 4450'. A temporary dry hole marker was bolted to the bradenhead flange.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may commence.
