13. Describe Proposed or Completed Operations

In addition to the recavitation that the subject well is currently approved to do (sundry notice approval received 1/21/1998), it is intended to hydraulically jet blast fourteen 300' laterals in the subject well in the following manner:

Pull the tubing, pull the liner as planned in the recavitation, trip in the hole orienting the aiming boot on the bottom of tubing, run in the hole with the high pressure jetting hose and hydraulically jet a 300' lateral in the coal. We will attempt to jet 14 laterals in the coal. We plan to evaluate the effectiveness of the laterals and then continue with the recavitation. We will then rerun the liner and production tubing and return the well to production.
