If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

We propose to test the Fruitland Coal formation by setting a cast iron bridge plug above the Pictured Cliffs perforations, pressure testing casing and bridge plug, and perforating the Fruitland Coal formation from 3592 ft. to 3624 ft. We will then acidize perforations and fracture stimulate the Fruitland. The zone will be swab tested for evaluation. The Pictured Cliffs formation will be temporarily shut in from production for testing the Fruitland Coal.
