(County or Subdivision)

**New Mexico**  
(State or Territory)

The elevation of the derrick floor above sea level is **5933** ft. (RDB)

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

As a result of the above well ceasing to produce we propose to repair it as follows:

1. Move in and rig up workover unit.
2. Locate and repair suspected casing leak.
3. Run rods and pump and return well to production.
4. Rig down workover unit and clean up location.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
