New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is 5720 ft. (RDB)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Spudded 12-1/4" hole December 6, 1959 and drilled to 232'. 9-5/8" casing was set at 232' with 190 sacks cement containing 2% calcium chloride. Circulated. After waiting on cement, tested casing and water shut off with 800 psi for 30 minutes, which held with no indication of pressure drop. Reduced hole to 8-3/4" at 232' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
