DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well will be re-entered and cleaned out to the original total depth of 4700', 4" casing run and cemented with sufficient cement to cover the Gallup Formation. The Gallup Formation will then be selectively perforated and sand-oil fractured, tubing run and the well completed.

I understand that this plan of work must receive approval in writing by the Geological Survey before operation is commenced.
