The elevation of the derrick floor above sea level is __5625__ ft. G.L.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill with rotary tools to the top of the Cliffhouse Sand, set pipe, then move in cable tools equipped with rotary attachment using gas and drill thru the Menefee and Point Lookout Formations for a Mesa Verde completion, then shoot with SNG for gas completion.

Casing Program:
150' Approx. of 10-3/4" Surface Casing and circulate cement to surface
3900' of 7" 20# J-55 casing cemented with 200 sacks
4000' of 1.9" OD tubing

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
