(NOTE: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

It is proposed to workover the above captioned well in the following manner in attempt to enhance the productivity.

It is planned to move in a workover rig around December 15, 1984. The depth of the 2 3/8" tubing will be checked with swabline and sinker bar. If bottom is found to be near the reported setting depth then attempt will be made to pull the tubing. If the tubing is stuck then the free point depth shall be determined. If the stuck point is in the open hole well below the 7" long string base, then it is contemplated that the tubing shall be perforated above the stuck point and the tubing shall then be swabbed to unload the hole of excess fluid to permit more efficient gas flow.

A production separator and stock tank will be set at the time the work is commenced and all swabbed and produced fluids shall be contained therein.

Verbal approval given to A.B. Geren ~~by~~ 12-14-84, by E. Becher.

18. I hereby certify that the foregoing is true and correct
