DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 11" hole on June 21, 1940 and drilled to 192'. 8-3/8" casing was set at 192' with 110 sacks of cement with 2 percent calcium chloride. Circulated 15 sacks of cement. After waiting on cement, tested casing with 450 psi which held with no indication of pressure drop. Reduced hole to 7-7/8" at 193'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
