New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is **5204** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging, cementing points, and all other important proposed work)

We propose to workover the above well as follows:

1. Move in and rig up workover rig.
2. Kill well and pull tubing.
3. Test Pennsylvanian perforated zones to determine fluid content of producing intervals and check for water production.
4. squeeze intervals that produce water.
5. Perforate additional untested zones in upper Pennsylvanian section and stimulate as necessary to obtain gas production.
6. Reconnect well to cable line and return to production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
