DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 12-1/4" hole on January 16, 1961, and drilled to 229'. Set 8-1/8" casing at 226' with 180 sacks cement containing 2% calcium chloride. Lost returns while cementing. Cemented down annulus with 85 sacks cement to surface. Waited on cement for 12 hours. After waiting on cement, tested casing with 450 psi for 30 minutes which held with no indication of pressure drop. Reduced hole to 7-7/8" at 229' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
