

EL PASO NATURAL GAS COMPANY

To J. M. Stricklin

Date: November 13, 1952

From: Gas Engineering

Place: Farmington, New Mexico

Subject: Test Data on Locke Taylor Well, Tycksen Pool Unit No. 1,
San Juan County, New Mexico.

Tested by: L. D. Galloway and D. W. Mitchell.

Location Sec. 23 , T- 29N , R- 13W , 990' N, 990' E.

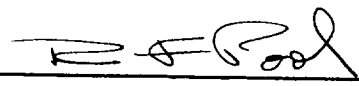

Shut-In Pressure 367 psig (shut-in October 22, 1952).

Open Flow 240 , MCF/D @ 14.7 psia and 60°
F. for 0.6 gravity gas. Flow through
casing for three hours.

Producing Formation Fruitland.
Shot with quarts from to
(No shot)

Field West Kutz.

H₂S Sweet to lead acetate.

1. The following is a list of the names of the persons who have been identified as having been involved in the activities of the group, in the order in which they were identified:

multi group χ^2 (df=10) = 10.00, p = .44, η^2 = .00

$$0.002^{+0.001}_{-0.001} \leq \langle \sigma v \rangle \leq 0.005^{+0.002}_{-0.002} \text{ GeV}^{-1} \quad (10)$$

Figure 1 is a line graph titled "Percentage of total sample by age group, 1970-2000". The x-axis is labeled "Year" and ranges from 1970 to 2000 in increments of 10 years. The y-axis is labeled "Percentage of total sample" and ranges from 0 to 100 in increments of 10. There are eight data series representing different age groups: 0-14, 15-24, 25-34, 35-44, 45-54, 55-64, 65-74, and 75+. The 0-14 age group starts at approximately 25% in 1970 and declines to about 10% by 2000. The 15-24 age group starts at approximately 20% and declines to about 15%. The 25-34 age group starts at approximately 15% and declines to about 10%. The 35-44 age group starts at approximately 10% and declines to about 5%. The 45-54 age group starts at approximately 5% and declines to about 2%. The 55-64 age group starts at approximately 2% and declines to about 1%. The 65-74 age group starts at approximately 1% and declines to about 0.5%. The 75+ age group starts at approximately 0.5% and declines to about 0.2%.
