The elevation of the derrick floor above sea level is **4976** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Navajo "C" Well No. 1. On January 23, 1959, 10-3/4" casing was landed at 2500' with 1200 sacks of cement, followed by 100 sacks neat cement. After waiting on cement for 20 hours, casing and water shut off were tested with 1000 pounds pressure for thirty minutes, which held with no drop in pressure. Reduced hole to 9-7/8" at 2500' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
