After squeezing 7" casing-9" hole annulus w/1200 sz cement in 3 stages, pressure tests and temperature survey indicate a leak in 7" casing still exists at approximately 730 ft. With packer run on 2-3/8" OD tubing and packer set in 5-1/2" OD liner at depth of 4148, proposal is made to squeeze casing leak through tubing-casing annulus with approximately 500 sz or enough cement to obtain a squeeze pressure of approximately 3000 psi. Temperature survey will be run after squeeze cementing to determine lowest point of entry.
