The elevation of the derrick floor above sea level is **5499** ft. (RDB)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casing; indicate mudding jobs, cementing points, and all other important proposed work)

The above well was restimulated as follows:

Moved on pulling unit and pulled rods and tubing. Cleaned out 4-1/2" casing with sand pump to 526'. Ran gauge ring to 5220' then set Baker retrievable bridge plug at 5210'. Loaded casing with oil and tested with 3,000 psi. Test o.k..

Perforated 5181-5186' with 6 shots per foot. Sand oil fracked these perforations with 25,300 gals. of oil containing 90 lbs. Adomite Mark II per 1,000 gals. and 5 gals. G-15 per 1000 gals and 20,000 lbs. sand. Pressures were Breakdown 2000, Average Treating 2800, Average Injection Rate 27.2 barrels per minute. Cleaned out sand and retrieved bridge plug. Ran 2-3/8" tubing, pump and rods and began recovering lead oil. Well currently recovering lead oil.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
