NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

and the second second and the contract of the

- 1. A packer leakage test shall be commenced on each multiply completed well wishin seven days after actual completion of the well, and namedly thereafter as prescribed by the order authorizing the multiple completions. Such men shall also be connected on all multiple completions within seven days following recompletion and/or observing or fine-tune streament, and whenever resential work has been done on a well during which the packer or the taking have been deserved. Tests shall also be taken at any time that communication is suspected or when requested by the Division.
- At least 72 hours prior to the commencement of any pactur lealings test, the operator shall notify the Division in writing of the errors time the test is to be commenced. Offset operators shall also be so notified.
- 3. The specier tealings test shall commence when both some of the deal completion are shall for pressure stabilization. both some shall remain also in until the treil-hard pressure in each has stabilized, provided however, that they used not remain also in more than seven days.
- 4. For flow Test No. 1, one none of the dual completion shall be produced at the normal rate of production while the other none remains also in. Such test shall be continued for seven days if the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer testage test, a gas well is being flowed to the atmosphere due to the incit of a pipeline connection the flow period shall be three hours.
- Following completion of flow Test No. 1, the well shall again be start-in, in accordance with Paragraph 3 above.
- Flow Test No. 2 shall be conducted even drough no lenk was indicated during flow Test No. 1.
 Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1

- and on each multiply completed well wishig seven days after except that the provincely produced sone shall remain abus-in while the some which y thereafter as prescribed by the order authorizing the was provincely abus-in is produced.
 - 7. Pressures for gas-come toots must be assessed on each some wish a deadweight pressure gauge at sime intervals as follows: 3 hours asset: immediately prior to the beginning of each flow-period, at follows minute intervals during the first hour thereof, and at heavily intervals destructive; including one pressure measurement immediately prior to the flow period (at apparelments) the midway point) and immediately prior to the described of each flow period. Other pressures may be taken as desired, or may be requested on wells which have previously shown questionable toot date.
 - 24-hour oil mem tangs all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the earl of each test, with a dendweight pressure gauge. If a well is a gas-oil or a oil-gas dual completion, the seconding gauge shall be required on the oil zone easy, with dendweight pressures as required shalve being minn on the gaz zone.
 - 8. The results of the above described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Azerc District Office of the New Mexico Oil Conservation Division of Northwest New Mexico Packer Leakage Test form Revised 10/01/78 with all deadweight pressures indicated thorson as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones easy).
