## NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

- i. A pactor leakage test shall be commerced on each multiply completed well wishin seven days actual completion of the well, and assumity thereafter as prescribed by the order authorizing the most on each multiply complessed well within seven days after—except that the provisority produced most shall remain shall in while the most which multiple completion. Such terms shall also be connected on all multiple completions within seven days vering recomplation analyse chamical or fracture greatment, and whonever remadial work has been done on a well during which the packer or the subing have been disturbed. Tests shall also be mices at any sime that communication is suspected or whom requested by the Division.

  2. At least 72 hours prior to the communications of any packer leakage seet, the operator shall notify
- the Division in writing of the owner time the tast is to be commerced. Offset operators shall also be so
- 3. The packer leakage sest shall commutee when both some of the dual completion are plant in for premure ambilizacion. both zones shall rounis alus-in until the well-bond pressure in much bus stabilized, provided bowever, that they need not remain shut in more than seven days.
- 4. For flow Test No. 1, one some of the dual completion shall be produced at the normal rate of prediction while the other zone remains shar-in. Such test shall be continued for seven days if the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer lealings test, a gas well in being flowed to the atmosphere due to the lack of a pipeline connection the flow period shall be three hours.
- 5. Following completion of flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.
- 6. Flow Test No. 2 shall be conducted even though no leak was indicated during flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1

a made and a supply to the second of the sec

- was proviously show in is produced.
- 7. Presented for gen-some tosts state be moneyard on each zone with a deadweight pressure gauge at time imprecise at follows: 3 hours tests: immediately prior to the beginning of each flow-period, at fifteen minute intervals during the first hour reof, and at hourly intervals thereafter, including one promure measurement maintally prior to the flow period, at least one time during each flow period (at recimately the midway point) and immediately prior to the conclusion of each ow period. Other presents may be taken as desired, or may be requested on wells which have previously shown questionable test data.

  24-hour oil zone tasts: all pressures, throughout the entire test, shall be
- 20-continuely measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-pas dual completion, the recurring gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gaz zone.
- 8. The results of the above described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Amec District Office of the New Mexico Oil Connervation Division of Northwest New Mexico Packer Lealings Test form Revised ic 01/78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
