Re: NTL-4A, Permission to vent oil well gas on the Horseshoe #1,
1815' FWL & 1680' FSL, Sec.2- T29N- R15W, San Juan Co., NM

Dear Ken,

Southern Union Exploration (SX) is requesting permission to vent gas, not to exceed 30 MCFGPD, on the above referenced well. The well was spudded May 9, 1983 and completed June 29, 1983. A GOR test was taken on June 24, 1983. Another well will be run following the electric hookup SX expects to occur on Nov. 3, 1983. This well has been shut-in since June 30 waiting for the electricity necessary for production from the pumping unit to begin.

This application for venting oil well gas is justified as it is anticipated a pipeline connection will be made within one year of the date of this letter. If anything further is required, please so advise.

Sincerely,

Katherine F. Folk
