DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

10 3/4 set at 292' with 125 sacks. 7" liner set at 3943 with 250 sacks. 5 1/2" liner set at 6480, cemented with 450 sacks. The 5 1/2" liner was squeezed at the top also. A TD of 8423 was reached; however, while attempting to run an electric log we encountered a bridge at 7833 which is the TD as to logging. There were numerous fishing jobs, stuck drill pipe, etc., which resulted in the hole side-tracking while attempting to complete fishing job and a new hole was drilled from 7833 to 8241. While making a trip at 8241 we were unable to re-enter the new hole and a decision was reached to abandon said well.

The well was plugged in the following manner: Cement plug 7850-9980. 100' plug - 5 1/2" liner (50' in - 50' out) interval, 6380-6480. 25 sacks in cement plug, top of 10 3/4" casing. Marker erected.

Complete details to be furnished on Form 9-330.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
