## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

7 7/8" hole was drilled to 6389, 5 1/2" 14 lb. J-55 casing was set at 6388 with 300 sac 50% Pozmix cement. Plug down 7:35 A.M., March 29, 1959. The cement was allowed to set until April 2, 1959, at which time the job was tested with 1000 lbs. for 30 min. with no pressure drop. It was not necessary in this case to drill the plug, therefore, the present plug back depth is 6354. The well was perforated 4 jet shots per foot from 6228 to 6247, 6251 to 6266, 6325 to 6340. The well was then given a 500 gals. acid wash and sand-fractured, details and results of these treatments to be reported in the near future.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
