The elevation of the derrick floor above sea level is 5471 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above well was converted to a water injection well on February 9, 1963 as follows:

1. Hot oiled casing annulus and pumped backload.
2. Moved in and rigged up pulling unit and pulled rods and pump.
3. Ran casing scraper on tubing, and circulated hole clean with ~~oil~~ water.
4. Displaced ~~oil~~ with treated water and pulled tubing.
5. Ran 2-3/8" tubing with Baker Model H packer set at 2790'.
6. Hooked up to injection system and started injecting water down tubing and annulus into lower and upper Gallup zones February 9, 1963.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
