DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 12-1/4" hole May 13, 1960 and drilled to 95'. Set 8-5/8" casing at 95' with 100 sacks cement containing 1 percent calcium chloride. Circulated 48 sacks of cement. After waiting on cement, tested casing with 400 psi for 30 minutes which held with no indication of pressure drop. Reduced hole to 7-7/8" at 95' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
