NORTHWEST NEW MEDICO PACKER LEAKAGE TEST INSTRUCTIONS

1. A packer lankage was shall be enumerated on each multiply completed well within seven dove after actual completion of the well, and anoually thereafter as prescribed by the order auchorizing the multiple completion. Such was shall also be commenced on all multiple completions within seven dove following recompletion and/or chemical or fine-ture weathers, and whenever remedial work has been done on a well during which the packer or the tubing have been dimerted. Turn shall also be taken at any time that communication is storported or when requested by the Division.

red of Preur, date) **

- At least 72 hours prior to the commencement of any packer leakage sum, the operator shall notify the Division in writing of the exact time the sum is to be commenced. Offset operators shall also be no notified.
- 3 The packer leakage test shall commence when both somes of the dual completion are about in for pressure stabilization. Both somes shall remain about in until the well-head pressure as such has stabilized, provided however, that they need not remain about in more than seven days.
- 4. For Plow Test No. 1, one zone of the dual completion shall be produced at the normal race of production while the other zone remains shur-in. Such sex shall be encounted for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an instant packer lenkage sext, a gas well is being flowed to the asmosphere due so the lack of a populate connection the flow period shall be three hours.
- 5. Following completion of Flow Ten No. 1, the well shall again be abortion, in accordance with Paragraph 3 above.
- Flow Tear*No. 2 shall be conducted even though no leak was indicated during Flow.
 Tear No. 1. Procedure for Flow Tear No. 2 is to be the more as for Flow Tear No. 1 energy.

- that the previously produced same shall remain short-in while the same which was previously short-in as produced.
- 7. Pressure for gas-som som he measured on each som with a deadwright pressure gauge at time insureds to follow: 3 hours unto insurediscely prior to the beginning of each flow-period, at fifteen-measure inservals during the flow hour thereof, and at heathy intervals thereofer, including one pressure measurement immedigacly prior to the conclusion of each flow period. 7-doy turns: immediately prior to the beginning of each flow period, at least one time during each flow period (at approximately the midway posted) and immediately prior to the conclusion of each flow period. Other pressure may be taken to desired, or may be requested on with which have previously above quantizable our days.

14-hour oil sear mus: all pressure, throughout the entire test, shall be entiremently measured and seconded with recording pressure gauges the accuracy of which must be checked at least rovice, once or the beginning and once or the end of each test, with a deadweight pressure gauge. If a well is a gra-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas sone.

8. The results of the above-described term shall be filted in ariplicate within 15 days after complexion of the term. Term shall be filted with the Azter Duraiet Office of the New Messon Oil Conservation Division on Northwest New Messon Packer Leshage Test Form Revised 10-01-78 with all dendweight pressures indicated thereon as well as the flowing temperatures (gas 2000s only) and groviny and GOR (oil 2000s only).
