13. Describe Proposed or Completed Operations

It is intended to sidetrack this well in the following manner per the attached wellbore schematic:

MOL&RU. A balanced cement plug will be set in the existing 5 1/2" liner.

A cast iron bridge plug (CIBP) will be set using a wireline and casing collar locator (CCL) @ approximately 3000'.

A whipstock assembly will be set on top of the CIBP. A window will be cut in the existing 7" csg.

Following clean up of the window, a 6 1/4" hole will be drilled with gelled water approximately 50'. At this point, compressors/boosters will be used to unload the hole with drill gas. Total depth is planned at approximately 3100'.

A standard Fruitland Coal open hole completion is planned.

14. I hereby certify that the foregoing is true and correct
