**Deepen to the base of Fruitland Coal & Re-cav**

(Note: Report results of multiple completion on Well

Completion or Recompletion Report and Log form.)

13. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

On 4/10/00 the #456 was deepened from 3125' to the base of the Fruitland Coal Formation at 3260'. Revised TD is 3262' KB. See attached original and supplemental mud logs. Based on drill rates, re-cav process and mud log information, the deepening encountered an estimated 25' to 35' of additional coal above the PC tongue. No oil show was seen in any of the sands. The base of the Fruitland Coal contained coaly laminations. The final pitot tube gas rate was 3042 mcf/d. In summary, the well averaged 750 mcf/d at 10 psig well head pressure (Compressor assisted) prior to workover. After re-cav the well was selling 1400 mcf/d at 85 psig well head pressure (No compressor). The top of the 5 1/2" liner hanger is at 2844' and the casing shoe at 3261'. The 2 3/8" tubing was landed at 3213'. Rig moved off location on 5/1/00.

14. I hereby certify that the foregoing is true and correct.
