La Plata Gathering Company
1940 Mercantile Dallas Building
Dallas 1, Texas

Attn: Mr. Walter M. Kilgo, Chief Engineer

Dear Sir:

We have received two copies of application for administrative approval for dual completion and for an unorthodox location for your proposed San Juan 32-5 Unit #2-27 well.

Under our rules Mr. A. L. Porter, Secretary-Director of the Commission is authorized to issue administrative orders in these matters, so I am forwarding the application to our Santa Fe office.

I have also talked to Mr. Al Johnson, who is your local representative, regarding the casing and cementing program in this well. As the well is located in an area where we have been experiencing a casing corrosion problem and as it is immediately adjacent to the Navajo Lake, we are requiring that cement be circulated from the Pictured Cliffs Formation to the surface or that a minimum of 600' of surface casing be cemented. Mr. Johnson has indicated that 600' of surface pipe will be used and that this will be indicated on the Notice of Intention to Drill when it is filed for approval.

Yours very truly

Emery C. Arnold
Superbisor, District #3

Figure 1 is a line graph showing the percentage of total catch versus the number of hauls for various fish species. The y-axis is labeled 'Percentage of total catch' and ranges from 0 to 100. The x-axis is labeled 'Number of hauls' and ranges from 0 to 10. Data points are plotted for several species: 0-haul species (open circles), 1-haul species (open squares), 2-haul species (open triangles), 3-haul species (open diamonds), 4-haul species (open inverted triangles), 5-haul species (open circles), 6-haul species (open squares), 7-haul species (open triangles), 8-haul species (open diamonds), 9-haul species (open inverted triangles), and 10-haul species (open circles). The 0-haul species show the highest percentage of total catch, followed by 1-haul species, and so on.

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance with a desired state or goal. If there is a discrepancy, a problem is identified.

1. The first step in the process of the investigation is to identify the problem. This is done by gathering information about the situation and the people involved. The next step is to analyze the information and determine the cause of the problem. This is done by looking at the data and identifying patterns. The third step is to develop a plan of action. This is done by deciding what needs to be done to solve the problem. The fourth step is to implement the plan. This is done by putting the plan into action. The fifth step is to evaluate the results. This is done by looking at the data and seeing if the problem has been solved.
