17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

To comply with NMCCC letter dated 10-11-68 it is intended to repair the bradenhead flow of this well by the following operation. The low productive Dakota formation will be plugged and abandoned at the same time and the well will become a single Mesa Verde well only:

Kill well with water. Pull Mesa Verde tubing and ascertain that Dakota tubing can be pulled out of packer.

Squeeze Dakota perforations w/50 sacks of Class "A" cement.

Pull tubing out of packer and spot 50 sack plug on top of packer.

Pull tubing, set a drillable bridge plug above Mesa Verde perforations and test to 2000 psi.

Perforate 2 squeeze holes at base of Ojo Alamo, set retainer above perforations, and squeeze w/150 sacks of cement.

Drill retainer & test perforations to 1000 psi, then drill BP & re-run Mesa Verde tubing.

18. I hereby certify that the information above is true and complete to the best of my knowledge and belief.
