DETAILS OF WORK

U. S. GEOLOGICAL SURVEY  
BLANCO MESA VERDE, NEW MEXICO

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This location is 300 feet due south of the 1-19 location which was "lost". It is proposed: To drill 20" hole to approximately 100' and set 16" casing at that point. Cement casing to surface. Then to drill 15" hole to approximately 800' and set 10-3/4" casing at that point. Cement casing to surface.

Then: drill 9-5/8" hole to approximately 3500'. Run DST's in Ojo Alamo, Fruitland, Pictured Cliffs, and any other formations of interest. 7-5/8" casing will be set at approximately 3500', cemented with 150 sacks cement.

Then: drill with gas in 6-3/4" hole to total depth in Dakota - approximately 8100'. If well warrants a completion attempt, set 5-1/2" liner at total depth, cementing off Dakota formation, and any other formations of interest, using two stage cement job if required.

Then: Perforate and sand water fracture zones of interest. If Dakota and Mesa Verde both production, 2-1/16" tubing will be used for Dakota and 1-1/2" tubing for Mesa Verde.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
