13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Field reports indicate the tubing in this well has developed a leak near the 400' level. Water levels in both the tubing and the Casing are at the surface. Williams is concerned that a such high levels of stagnant water could result in freezing and wellhead problems during the winter.

Williams Production is proposing to move a pulling unit onto the well, replace the entire string of tubing and swab in the well. The entire procedure will require only one day. Work is scheduled to begin and complete on 11/23/1999
