DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Notice of Intention to drill filed under date of July 8, 1960 indicated this would be a "Mesa Verde" well. It is now intended to drill through the Dakota formation expected at 8300 feet.

Surface casing was set at 816' on July 13, 1960 as reported under date of July 15, 1960 - and it is now anticipated 5-1/2" 17' casing will be set through the Dakota and cemented with 300 sacks of cement. Well will be perforated through casing and sand water fractured. If productive, 2-3/8" EUS tubing will be set 10 feet off bottom.

Permission to complete this unorthodox location in the Dakota formation was granted by New Mexico Oil Conservation Commission Case No. 2013 - Order No. 37 - 1722

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
