San Juan County, New Mexico

Gentlemen:

Enclosed in quintuplicate for your approval is Request for Allowable (Form C-104) following remedial work performed on the subject well.

During February, 1967, a Model D packer was set at 4380 and 2-3/8" tubing was run to 4367'. The deliverability after this workover was 6888 MCF.

On March 22, 1968, the 2-3/8" tubing was pulled from the well and the well is presently producing through the 4-1/2" casing which is cemented to the surface.

The well is presently producing approximately 10,200 MCFPD in order to make up back allowable accumulated during the period the tubing was in the well.

We are requesting that this deliverability test suffice for test after workover and annual test.

Yours very truly,

Troy C. Simpson
