N.M.P.M.
(Meridian)

Verde-Gallup
(Field)

San Juan
(County or Subdivision)

New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is 5666 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On July 14, 1957, 5-1/2" casing was set at 2440' with 100 sacks of cement. After waiting on cement for four days, casing and water shut-off were tested with no drop in pressure.

On July 23, 1957, this well was sand-oil fracked with 30,000 gallons oil and 30,000 pounds sand and 165 gallons tretolite in frac fluid. Formation broke at 1000 pounds pressure. Average injection rate 72 barrels per minute. Swab back 200 barrels of load oil in six hours.

I understand that this plan of work must receive approval in writing by the Geological Survey before operation may be commenced.
