The elevation of the derrick floor above sea level is 5737 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On September 26, 1956, this well was spudded, and on September 27, 1956, 9-5/8" casing was landed at 257 feet and cemented with 185 sacks cement. After waiting on cement for 24 hours, casing and water shut off were tested with 800 pounds pressure for 30 minutes with no drop in pressure. Drilling operations were resumed.

On October 9, 1956, 5-1/2" casing was set at 2228 feet and cemented with 85 sacks cement. After waiting on cement for three days, a three hour bailing test proved successful. Completion operations were begun.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
