Astec, New Mexico July 11, 1962

Well No. 19-16 is located 660 ft. from S line and 659 ft. from E line of sec. 19

SE 1/4 Sec. 19 31 North 14 West N.M.P.M.
(4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Verde-Gallup San Juan New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the Ground ~~drill hole~~ above sea level is 5577 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to pull casing and plug the subject well. A 30-sack plug will be set covering the open hole and approximately 30' of casing. A 30-sack plug will be set covering the stub on the cut-off portion of the pipe. a 15-sack plug will be set covering the end of the surface casing. a 5-sack plug will be set on surface for a monument. In the event we are unable to pull any casing the casing will be filled with mud from the bottom plug to the surface plug. Cement will be pumped down the annulus between the surface pipe and production pipe to prevent surface water encroachment.

The production from this well is now zero.

I understand that this plan of work must receive approval in writing by the Geological Survey before operation.
