DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill with rotary tools to a depth of 100+ feet, set 9-5/8" casing and cement to surface w/100 san. Thereafter to drill with rotary tools to the top of the producing zone, run electric log and run 5-1/2" casing at approximately 2,500 feet and cement w/90 san. It is then proposed to drill in with cable tools, run GHI log, free through casing w/20,000 gallons of crude and 20,000 sand; run and test well with cable tool rig until daily rate of production is established, and complete. The surface of the section, containing 40 acres, more or less, is dedicated to the well site. Estimated total depth: 2,600+ feet.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
